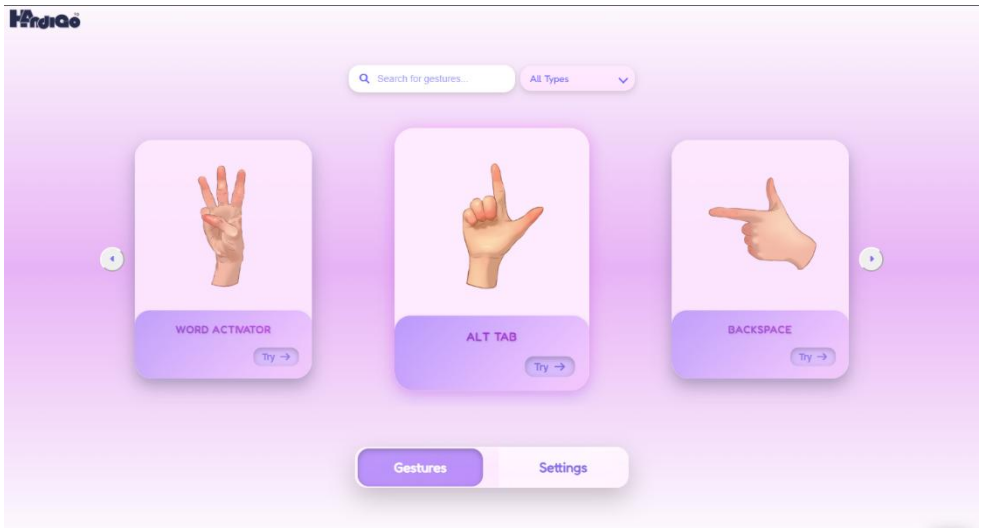
# USER MANUAL HANDIGO

## Guide App

The Guide App displays all available gestures, explains which settings you can customize, and once installed, it runs seamlessly in the background to provide continuous gesture control.



## Floating Window

### System Off

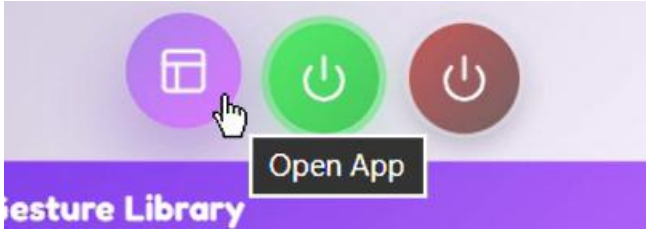
Violet (no pulse): Indicates that the floating system is currently turned off.

### System Active

Green (with pulse): The system is active and working properly, showing that gesture controls are enabled.

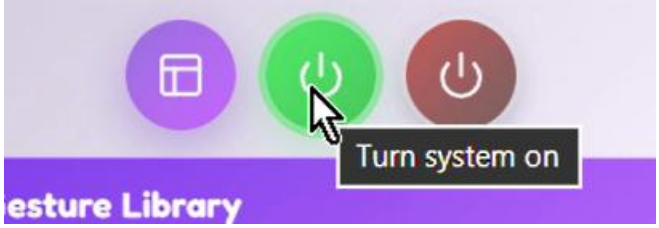
**Open HandiGo App**

House Icon: Opens the main HandiGo application for further settings and controls.



**System Activation**

Activation: Activates the system command, allowing gestures to be recognized.



**System Deactivation**

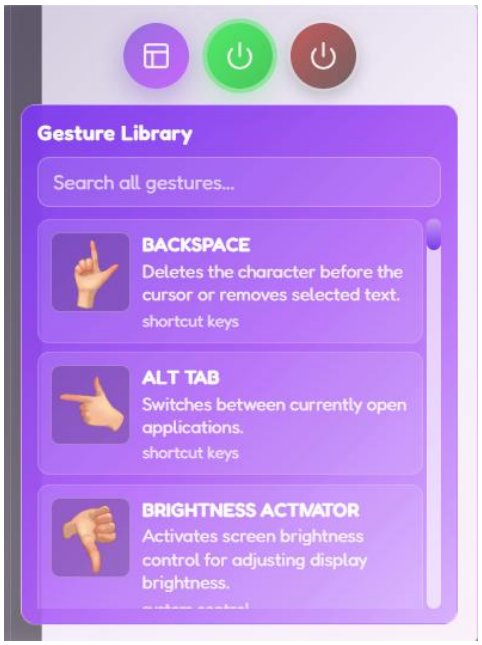
Deactivation: Deactivates the system command, temporarily stopping gesture recognition.

**System Notification**

Notification: Displays in a floating window that informs the user which command has been activated or performed. This real-time visual feedback helps users confirm that their gesture or action was successfully recognized and executed.

**Gesture Summary**

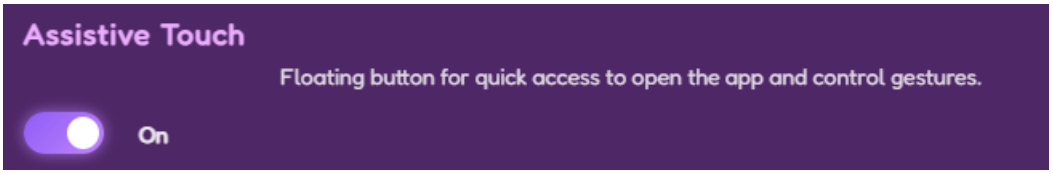
Gesture Summary: Provides a searchable list of all available gestures and their corresponding commands. This feature allows users to quickly find and review gestures without needing to navigate through different sections of the application, making it more convenient and user-friendly.



## Configuration

**Assistive Touch On/Off**

Enable/Disable Assistive Touch: Toggle the assistive touch system on or off as needed.

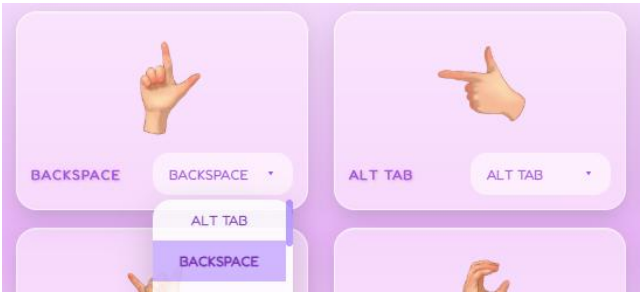


**Camera Device Selector Preview**

Camera Device Selector: Displays the currently active camera and allows users to switch between available camera devices. If a newly connected camera does not appear, click the refresh button to reload and detect available cameras.

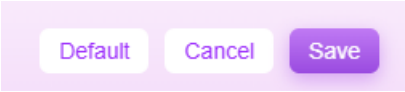
**Default and gesture changing**

Customize Gesture: Save a specific gesture first, then modify it using your desire command. The first image shows the default, and the second shows the gesture being changed



**Save and Default**

Save the customized gesture or revert it to the default configuration.

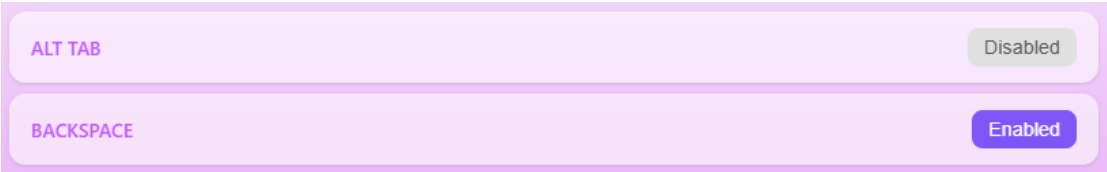


**Non-Customizable Gesture**

Non-Customizable Gestures: Some gestures cannot be customized and remain fixed by default.

**Command Activation**

Command Activation: Enable or disable specific commands according to your preference.



**Gesture Commands Guide**

Below are the available gesture commands in the system. Each gesture includes a built-in buffer and delay protection to prevent accidental multiple activations or spamming. Some gestures are Configurable (customizable), while others are fixed for system stability.

**ALT TAB**

Switches between currently open applications, similar to pressing *Alt* + *Tab* on a keyboard.

**Type**: Customizable

**Note**: A short delay prevents rapid switching between apps.

**BACKSPACE**

Deletes characters one by one. Works in any text field.

Type: Customizable

**BRIGHTNESS**

This gesture opens the system brightness control bar, allowing you to quickly adjust your screen brightness without using the keyboard or mouse.

**Type**: Customizable

**Important**: After activation, use the Neutral Gesture or wait seconds before performing the gesture again to prevent multiple brightness bars from opening. A buffer and delay mechanism is applied to ensure smooth and controlled activation.

**CAPSLOCK**

Toggles uppercase typing on and off.

**Type**: Customizable

**Important**: After activating, use the Neutral Gesture to avoid double activation

or wait 3 seconds before performing it again.

**COPY**

Copies selected text or content. Works in any application (e.g., Chrome, Word).

**Type**: Customizable

**Reminder**: You must select the content first before copying.

**CUT**

Removes selected content and saves it to the clipboard.

**Type**: Customizable

**Reminder**: You must select the content before performing this gesture.

**DRAG**

Allows you to drag items, similar to holding down the mouse button while moving.

**Type**: Non-customizable

**EXCEL**

This gesture opens Microsoft Excel instantly. If Excel is already open, performing the gesture again will close the application.

**Type**: Non-Customizable

**Important**: After closing Excel, wait at least 3 seconds before performing the gesture again. This delay prevents unintended reopening or repeated triggering. A built-in buffer system ensures stable activation.

**FIND**

This gesture activates the Find function (similar to pressing Ctrl + F), allowing you to search for words or content within the current application. Works across most supported apps and browsers.

**Type**: Customizable

**Important**: Use the Neutral Gesture after activation or wait 3 seconds before performing it again to avoid repeated search prompts.

**HOME**

This gesture opens the Windows Home (Start Menu), allowing quick access to applications, system settings, and power options.

**Type**: Customizable

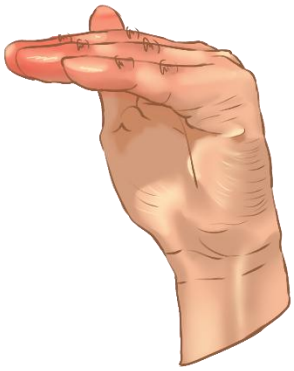
**Important**: After activation, perform the Neutral Gesture or wait 3 seconds before repeating the gesture to prevent multiple openings. A delay buffer is applied to ensure smooth system response.

**KEYBOARD ACTIVATOR**

This gesture opens the On-Screen Keyboard, allowing you to type without using a physical keyboard. It is especially useful for touch-based or accessibility-focused interactions.

**Type**: Non-Customizable

**Important**: After activating the On-Screen Keyboard, wait at least 2 seconds before performing the gesture again to close it. This delay prevents accidental rapid toggling. A built-in buffer system ensures smooth and controlled activation.



**LEFT CLICK**

Performs a standard mouse left-click action.

**Type**: Non-customizable

**MOVE CURSOR**

Moves the mouse cursor based on your hand movement within the detection frame. Before moving, make sure to center your finger inside the frame for accurate tracking. Large hand movements are not necessary, as the cursor responds even to small, subtle motions. This allows smoother control and prevents the need for drastic or exaggerated movements.

**Type**: Non-customizable

**MUTE / UNMUTE**

This gesture toggles the system media volume between mute and unmute. works with system-wide audio, including music players, browsers, and other multimedia applications.

**Type**: Customizable

**Important**: After activation, use the Neutral Gesture or wait 3 seconds before performing it again to prevent repeated toggling.

**NEUTRAL**

The Neutral Gesture serves as an idle or reset position. It allows users safely switch between gestures and helps prevent unintended activations.

**Type**: Non-Customizable

**Important**: It is recommended to return to the Neutral Gesture after performing any action to ensure accurate recognition of the next command.

**NEW FILE**

This gesture creates a new file or document in most supported applications. In web browsers like Chrome, it can also open a new tab.

**Type**: Customizable

**Important**: Ensure the active application supports new file or new tab creation. Use the Neutral Gesture afterward to avoid multiple file or tab openings.

**NEXT**

This gesture moves to the next item or slide. It can be used in presentation software like PowerPoint and in multimedia platforms as Spotify or YouTube to skip to the next track or video.

**Type**: Non-Customizable

**Important**: Perform the Neutral Gesture or wait 3 seconds before repeating action to prevent skipping multiple slides or tracks unintentionally.

**PASTE**

This gesture pastes content from your system clipboard into the active application, similar to using the Ctrl + V shortcut.

**Type**: Customizable

**Important**: Make sure you have copied content to your clipboard before performing this gesture. Without copied data, the paste function will not produce any result.

**PAUSE / PLAY**

This gesture toggles between pause and play in presentation software such as PowerPoint and in multimedia applications like music and video players.

**Type**: Customizable

**Important**: After performing the gesture, wait at least 3 seconds before repeating it. This delay prevents rapid or unintended toggling between pause and play states.

**PREVIOUS**

This gesture navigates to the previous slide in presentation software or returns to the previous track or video in multimedia platforms such as Spotify or YouTube.

**Type**: Non-Customizable

**Important**: Use the Neutral Gesture or wait 3 seconds before repeating the action

to avoid skipping multiple slides or tracks unintentionally.

**PRINT**

This gesture opens the print dialog of the active application, allowing you to print documents, images, or web pages.

**Type**: Customizable

**Important**: Ensure a document or printable content is open before performing this gesture. Repeated activation may open multiple print dialogs.

**DOUBLE CLICK**

This gesture simulates a mouse double-click action. It can be used to open files, launch applications, or select items that require a double-click interaction.

**Type**: Customizable

**Important**: Position the cursor correctly before performing this gesture to the intended item is selected.

**REDO**

This gesture restores the most recently undone action, similar to using the Ctrl + Y shortcut in many applications.

**Type**: Customizable

**Important**: The Redo function will only work if there is a previously undone action available. If no action has been undone, this gesture will have no effect.

**RIGHT CLICK**

This gesture simulates a mouse right-click action, allowing you to open context menus and access additional options for files, folders, applications, or selected items.

**Type**: Non-Customizable

**Important**: Ensure the cursor is positioned over the intended item before performing this gesture to access the correct context menu.

**SAVE**

This gesture saves the current document, file, or work in the active application. It functions similarly to the Ctrl + S shortcut and works in most supported applications.

**Type**: Customizable

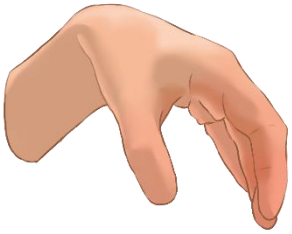
**Important**: Make sure a document or editable file is open before performing this gesture.

**SAVE AS**

This gesture opens the “Save As” dialog, allowing you to save the current document with a different name, format, or location.

**Type**: Customizable

**Important**: Ensure there is an active document before performing this gesture. Repeated activation may open multiple Save As dialogs.



**SCREENSHOT**

This gesture captures a screenshot of the current screen or active window, depending on system configuration.

**Type**: Customizable

**Important**: After performing the gesture, wait briefly before repeating it to prevent multiple screenshots from being taken unintentionally.

**SCROLL**

This gesture allows vertical scrolling within applications and web pages. To scroll up, move your hand upward within the camera frame. To scroll down, move your hand downward within the camera frame.

**Type**: Non-Customizable

**Important**: Ensure your hand movement is clearly visible within the detection frame. Smooth and controlled motion improves scroll accuracy and prevents unintended rapid scrolling.

**SELECT ALL**

This gesture selects all text or content in the active document or application, similar to using the Ctrl + A shortcut.

**Type**: Customizable

**Important**: Make sure the cursor is active inside a document or text field before performing this gesture.

**TAB**

This gesture performs the Tab function, moving the cursor to the next field, indentation level, or selectable element.

**Type**: Customizable

**Important**: Ensure the cursor is positioned at the correct location or that a field is selected before performing this gesture. Without an active input area, the action may not produce a visible result.

**UNDO**

This gesture reverses the most recent action performed in the active application, similar to using the Ctrl + Z shortcut.

**Type**: Customizable

**Important**: The Undo function will only work if the application supports history tracking and if there are a previous action to revert. If no prior action exists, the gesture will have no visible effect.

**VOLUME ACTIVATOR**

This gesture activates the system volume control. Once activated, you can adjust the volume by positioning your hand within the camera frame. Move your hand toward the left side of the frame to decrease the volume, and toward the right side of the frame to increase the volume.

**Type**: Customizable

**Important**: Ensure your hand remains clearly visible within the detection frame while adjusting the volume. Smooth movement improves accuracy and prevents sudden volume changes.

**WORD ACTIVATOR**

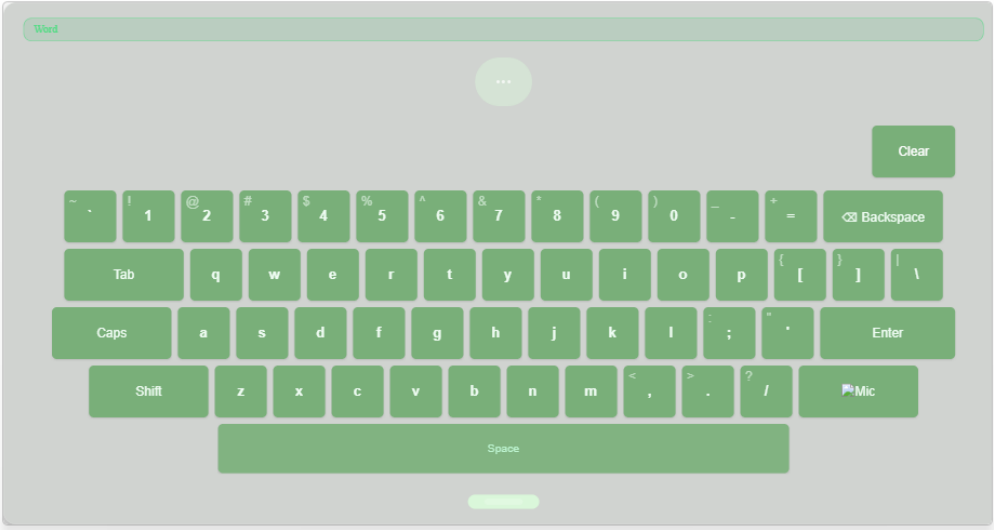
This gesture opens Microsoft Word. If the application is already open, performing the gesture again will close it.

**Type**: Non-Customizable

**Important**: Wait at least 3 seconds before performing the gesture again to toggle Word open or closed. This delay prevents unintended repeated activation.

**On-Screen Keyboard**

The On-Screen Keyboard is an on-screen keyboard that allows you to type without using a physical keyboard. It can appear embedded inside the application or as a movable floating keyboard anywhere on your screen.



## HOW IT APPEARS

The keyboard automatically appears when you select:

- Text fields
- Search bars
- Password fields
- Text areas

It automatically hides when:

- You click or tap outside the input field
- You press the Close key

## KEYBOARD FEATURES

Full Keyboard Layout

Includes letters (A–Z), numbers (0–9), special characters, and space bar.

Action Keys

- Backspace – Deletes one character
- Tab – Moves to the next field
- Caps Lock– Toggles capital letters
- Shift – Capitalizes one letter
- Enter – Submits or creates a new line
- Space – Inserts a space
- Mic – Activates speech-to-text
- Clear – Deletes all typed text
- Close – Hides the keyboard

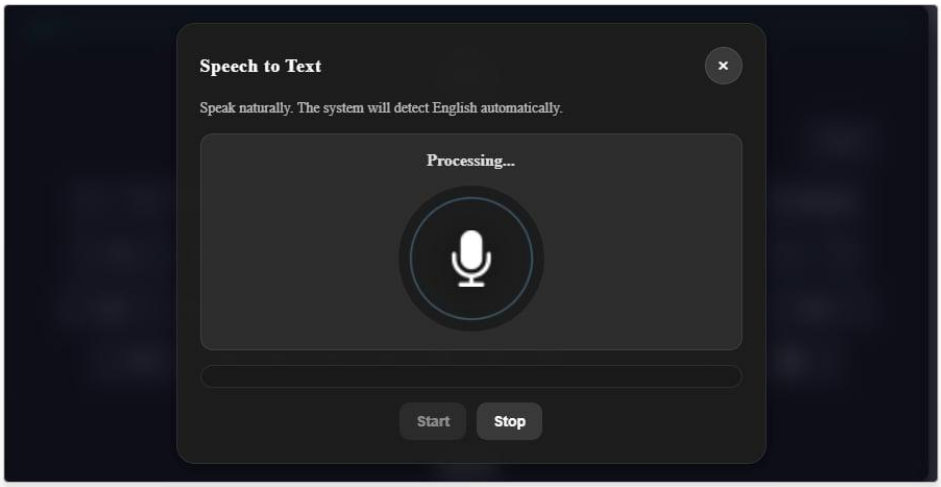
## WORD SUGGESTIONS

Suggestions appear above the keyboard while typing. Tap a suggestion to insert it instantly.

- Completes words
- Corrects spelling
- Suggests the next word
- You can enable or disable suggestions from the keyboard menu

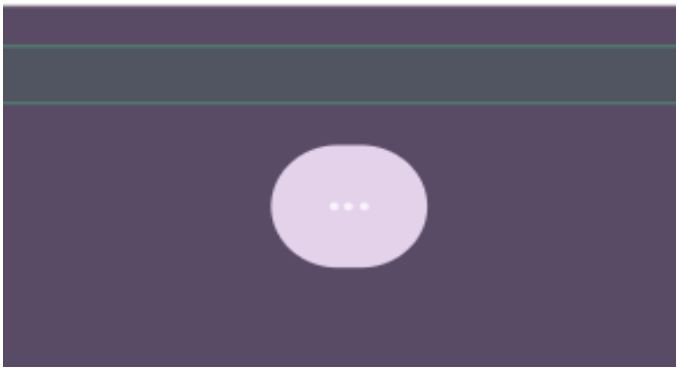
**SPEECH TO TEXT**

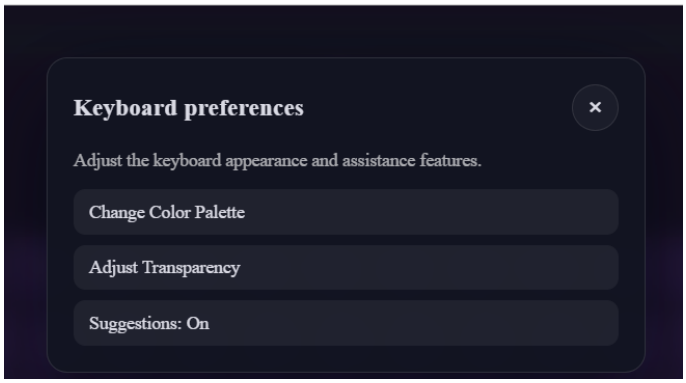
Tap the Mic key and speak clearly. Your voice will automatically convert into text. Tap again to stop recording.



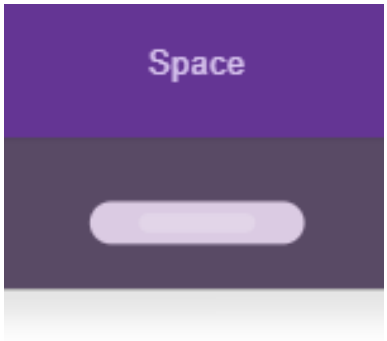
**MOVE & RESIZE**

**Move**: Drag the keyboard using the top bar. The top bar also functions as the menu button — click it to open the keyboard settings.





**Resize**: Drag the resize handle to adjust size.



**POSITION OPTIONS**

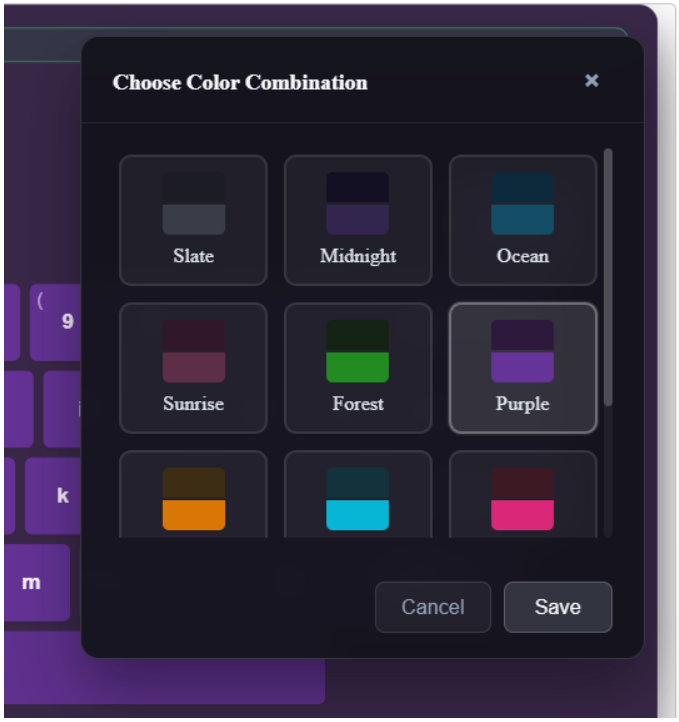
You can place the keyboard in:

- Top Left
- Top Center
- Top Right
- Bottom Left
- Bottom Center
- Bottom Right
- Or drag it anywhere freely

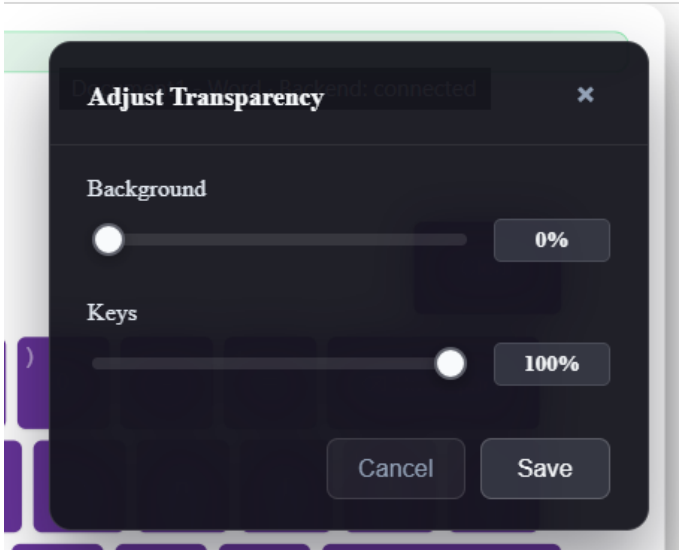
**APPEARANCE**

Customize the keyboard appearance:

- Color Themes – Choose preset palettes



- Transparency – Adjust the keyboard transparency



**AUTO SAVE**

The keyboard automatically saves your size, position, theme, transparency, and suggestion settings. These are restored the next time you use the keyboard.
